To whom it may concern,

It is my honor to recommend Ochiabuto Jideofor for a master's degree in Advanced Computer Science at the University of Hertfordshire. I have had the pleasure to know and work with Ochiabuto for the last two years. He first worked with me as a graduate intern, in a team of software engineers I manage at Zercom Systems in Lagos, Nigeria.

While an intern, Ochiabuto impressed the team and showed he was no novice in the field, by having breakthroughs on minor bug fixing and WordPress plugin customization tasks that were assigned to him. From the way he worked, I observed he was very analytical, and investigative, from the way he identified problems. He showed he was reliable and wanted more important tasks. In a short time, he joined the team fully as a full-stack developer.

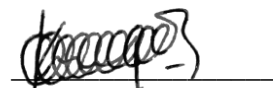

Ochiabuto brings to all his activities energy, enthusiasm, intelligence, and commitment, which is to be expected in any successful member of an organization. He consistently delivered high-quality software for our organization, and engaged clients technical teams properly, to aid integrations and fixes on the client side. He knew when the room needed to be alive, and he made it come alive.

He has a deep-rooted spirit of helpfulness, as I have observed him helping younger teammates and interns as they struggled with their tasks. I taught him, he could also ask for help the way he gives it.

What I find most fascinating in Ochiabuto's character is his variety of interests outside software. Two I know are sales, business operations, and sports. He can be quickly engrossed in an in-depth discussion on those topics and once chose to handle support and sales calls for a short period. Ochiabuto's broad range of interests speaks well to his potential as a researcher, as he could bring a vast array of ideas and theories to the ongoing research, while also introducing fresh and intriguing hypotheses that could interest fellow researchers.

Ochiabuto was a valued member of our organization, whom his team could rely on, regardless of the difficulty of the task, or deadline. His combination of logical and analytical thinking, commitment, perseverance, and compassionate character will definitely make him a valuable member of the master's degree program in Advanced Computer Science at the University of Hertfordshire. I encourage you to look favorably upon his application. Please contact me if you have any questions regarding this recommendation.

Sincerely,
